

ABSTRACT

5 The present invention relates to a device that is selectively interconnectable to a child's seat. More specifically, one embodiment of the present invention is a travel tray that is adapted to selectively interconnect to a child safety seat, a stroller, a seat in a sports venue, or an airplane seat. This embodiment of the present invention is constructed of compliant material that is adapted to receive and secure a plurality of cups and various other items with drink holders and pockets. Furthermore, the present invention includes a rigid area, wherein a child is provided with a location that is more stable in which to read, draw, or play.
